Understanding the effect of opinions and behaviours on the spread of infectious diseases

Riccardo Tessarin

Contents

I. Introduction	3
1. Theoretical foundations	3
1.1. Historical Background of epidemiology research	3
1.2. Glossary	3
2. Epidemiological models categorization	3
2.0.1. Mean field models	3
2.0.2. Stochastic models	3
2.1. Agent based models	3
2.2. Multi-layer network	3
3. Analysis of epidemiological and opinion models	3
3.1. Opinion models	3
3.2. Disease models	3
3.3. Opinion-disease models with multilayer networks	3
II. Opinion-disease model	3
4. My model	3
4.1. Problem formulation	3
4.2. Adopted models	3
4.3. Implementation details	3

5. Observation of real data	4
5.1. why observing real data	4
5.2. Implementation details	4
 III. Results	 4
6. My model result	4
6.1. sensitivity and stability analysis	4
 7. Conclusions	 4

Part I.

Introduction

1. Theoretical foundations

1.1. Historical Background of epidemiology research

1.2. Glossary

2. Epidemiological models categorization

2.0.1. Mean field models

2.0.2. Stochastic models

2.1. Agent based models

2.2. Multi-layer network

3. Analysis of epidemiological and opinion models

3.1. Opinion models

3.2. Disease models

3.3. Opinion-disease models with multilayer networks

Part II.

Opinion-disease model

4. My model

4.1. Problem formulation

4.2. Adopted models

4.3. Implementation details

discussion on modelling choices,

5. Observation of real data

5.1. why observing real data

5.2. Implementation details

Part III.

Results

6. My model result

6.1. sensitivity and stability analysis

7. Conclusions
